

All claims are supported by Experiments and photos.

**What is Aether.....**

- 1 Aether is elementary particles (like electrons) that are free from nucleus particles.
- 2 Aether particles can be at rest or in motion. They exist in matter or space.
- 3 Aether particles are hurled from the Sun and all luminous bodies and sources.

**Aether in a vacuum...**

- 4 Aether is primarily moving energy packets (like bar magnets) that are ejected from violent molecular shaking like in the Sun or other luminous sources. Similar to electrons.
- 5 Aether particles manifest as “Light and Heat” when they collide with complete matter.
- 6 These Aether particles hit the cloud of electrons in matter and shake the matters electrons (heat) and or bounce off the cloud of electrons in orbits and dislodge particles as Light.
- 7 Aether in transit in a vacuum still has mass and potential energy and is Dark energy and Dark matter until it collides with matter that is complete and displays heat and light from the impact.
- 8 Aether Particles are polar bits of energy with net negative ratio of 1 to 1.0002 (just a guess at ratio). However it does appear that all matter has a slight extra negative mass.
- 9 Due to aether being negative particles they avoid each other mostly in space vacuum.
- 10 The Earth and all complete matter have both positive and negative forces with a slight extra negative as seen in tractor beam magnets. This Positive mass creates a strong attraction to negative aether (electrons) but a slight nuclear repulsion which creates quantum fields.

**Aether in the Earth and all matter containing Nuclei....**

- 11 Aether particles are like bar magnets that can float around in air and also in fluids and gases and solids and all matter. If there are free extra aether particles in matter it “Conducts”.
- 12 Electrical Conduction is particles of aether being pushed thru matter that has excess electrons that are mobile as if in a hearty soup.
- 13 At extreme energies....extreme Aether polar electrical push...almost anything will conduct as seen with lightning.

**Aether and “Magnetic Fields” ....**

- 14 All magnetic fields are a result of polarized aether particles. Some seen with magnetic iron filings and some seen as light under correct conditions....but both are aether.

**Aether fields in the air.....**

- 15 As the Fast Aether Particle (light) flies thru “slow Aether” which is simply in the air but not “pushing” it creates field patterns in the slow aether. The “Light” pushes forward and Polarizes the slow aether into disks of quantum circles that display dots (bumps) at the positive negative junctions. Seen clearly in detail in experiments.

**Aether inside solid matter ....**

- 16 Electric current is aether pushed thru wires and conductors of many types but if there are no free aether particles (extra electrons) The matter is an insulator and aether cannot move.
- 17 The “Electricity” pushes forward and Polarizes the slow aether into disks of quantum circles that display with Iron Filings into patterns at the positive negative junctions. Seen clearly in every detail in experiments. The quantum circles display around the wires.

**Aether is a liquid and so is light....**

**18 Aether displays the same characteristics as liquid.**

**19 Liquid can speed up or slow down and so can light and photos prove it.**

**20 In a venturi light becomes explosive and accelerates and can be hear to sizzle.219 Accelerated Aether can crash into slow aether and create a mini aether particle and photos prove that.**

**Aether and sono luminescence....**

**21Aether will fill any void it seems instantly if light sources are available.**

**22 A firecracker in water expands beyond the matter from the explosion creating a material void that collapses violently.**

**23 When a cavity in space is made (as with the firecracker) if there is not enough matter or aether in the expanding cavity .... the excess cavity will fill with electrons which are the aether. The electrons are raw energy and as the cavity collapses can create temps of millions of degrees.**

**Conclusions....**

**1 Light is particles called aether.**

**2 The particles are all net negative but only slightly.**

**3 The particles are dark in space vacuum.**

**4 The Particles can be accelerated and slowed down.**

**5 The particles can divide.**

**6 Electricity uses the same aether particles.**

**7 Nuclear cores (Complete matter) (containing nucleus) has a strong positive and a net negative. This creates attraction to all other matter and slight repulsion of negative aether particles which keeps the quantum distance.**

**Much more work to be done but this model seems to satisfy “Universality” principles so far. Videos were made on all the items above.**

Aether fields finally photoed and are exactly as expected <https://www.youtube.com/watch?v=jD7kVL9fiAA&t=301s>
